

# SeaView™

## Surf Surveillance Camera System

Long-range surveillance in

- Coastal
- Harbor
- Border environments

### Features

- Remote viewing capability
- Meets requirements of River Bar Surveillance — 33CFR
- Covers over 40 square nautical miles around the system
- Consistent monitoring of vessel traffic through choke points
- Day and night capability

### Withstands

- High winds
- Heavy moisture and salt spray resistant
- Temperatures - 32° to +128°

### Components

- QPT-90 Marine
- Unicom™ controller
- Touchscreen controller
- Video monitor

### System

- IR Camera
- Color Day Camera
- Tandem Motion
- Dual Camera Capability
- Pan & Tilt
- Zoom Capable

## SeaView

### Surf Surveillance Camera System

Optimized for performance in all weather conditions, day or night, the SeaView is the ideal system. Whether your needs include long-range surveillance of coastal, harbor or border environments, SeaView is ready to do the job.

The SeaView video surveillance system is designed for harsh environments. Capable of withstanding winds up to 150 mph, the IP-66 compliant QPT-90 is an environmentally sealed unit with a built-in heater and an internal processor.

The Unicom tabletop/rack mount controller lets the operator command with a joystick and touch screen controls for expandable operations. Unicom is a universal controller that can interface via IP Ethernet, RS232/422, and USB driven devices. QuickSet has employed touch screen technology to aid use interaction during high stress situations. All critical camera and QPT-90 controls can be managed with GUI by touching on-screen buttons.

Run automatic search programs (called *tours*) through the SeaView interface. The operator can select up to 32 positions to be viewed in up to three tours.
